Gigaset Maxwell 10

The next chapter in the history of business communication

Maxwell inspires communication and interactivity with features that you won't find on any other office phone – all on a device that is a joy to operate. Powerful apps allow you to experience the features and telephone content in an interactive manner, providing easy access to information and connecting you to internal libraries and databases. All of which makes the Maxwell 10 a powerful partner on your desktop.

- Integrated Power over Ethernet
- Internal directory with 10.000 entries
- Access to Cloud based directories (Google contacts, LinkedIn, Facebook) LDAP, MS Exchange, XML
- Hearing aid compatible

Maxwell inspires you

Maxwell inspires communication and interactivity with features that you won't find on any other office phone – as a result, it is quick and easy to hold video conferences directly from your desk, and everyday functions such as call waiting, call divert and telephone conferences are quick and easy to use. Imagine the

scenario: During a conference call with colleagues, an additional external participant has to be added during the conference and a further person has to be put on hold to be added at a later point. How likely do you think it is that one of these participants will be dropped from the line? With the Maxwell 10, you can use the drag-and-drop feature with a swipe of your finger to accept required participants into the conference call or put them on hold, guaranteeing you will not lose participants on the call.

A platform that works

Maxwell uses Android 4.2.2. This version features alarms functions, widgets and a customisable home screen, which you can set up easily using the drag-and-drop feature. Subsequently, the movements required for operating the phone have also been optimised. Now you can open the status bar by swiping your finger over the top left-hand area of the screen on your device. If you swipe to the right, the screen featuring the general system settings opens.

Special business apps for you

Apps help you and your team work at a faster and smarter pace, by allowing all companies and teams to work together, regardless of their location. Maxwell therefore comes with a selection of pre-installed apps to make business communications even easier. In addition, the advanced Android operating system offers you the opportunity to access a wide range of powerful apps to help you to use your Maxwell for a wider range of applications. Here are a just a few examples of possible applications – the wealth of available apps is almost limitless.

- Email
- Editing Microsoft Office™ documents
- Third-party video conferences with, for example, Polycom
